PROFESSIONAL SUMMARY

Senior Cloud & DevOps Engineer with 10+ years in IT, focused on AWS infrastructure. Primary infrastructure administrator for 12+ AWS accounts at LG CNS, running production workloads with Terraform, Amazon ECS, serverless services and CI/CD. Delivered production hybrid networking (Site-to-Site VPN, BGP, Transit Gateway), an event-driven carrier integration, AI-assisted operations on Amazon Bedrock and multi-account FinOps reporting, and deployed an Amazon EKS microservices platform to QA. Also supports three GCP data environments, where pipeline optimization cut BigQuery and Airflow cost by 50%.

CORE TECHNICAL SKILLS

Cloud: AWS (VPC, Transit Gateway, Site-to-Site VPN, EC2, ECS, EKS, ECR, Lambda, API Gateway, SQS, SNS, EventBridge, S3, RDS, Aurora, DynamoDB, ElastiCache, Athena, Glue, Bedrock, CloudFront, Route 53, CloudWatch, IAM, Organizations, Control Tower, GuardDuty); GCP (BigQuery, Cloud Composer/Airflow, Cloud Storage)

IaC & automation: Terraform, CloudFormation, Python, Bash

Containers & delivery: Docker, Amazon ECS (production), Kubernetes and Amazon EKS (QA), Helm, Argo CD (GitOps), GitHub Actions with OIDC, CI/CD pipelines

Operations & monitoring: CloudWatch, CloudTrail, Grafana, Prometheus, Athena, AIOps with Amazon Bedrock, incident troubleshooting, Linux (RHEL, Ubuntu)

Networking & databases: VPC design, Transit Gateway, BGP, Site-to-Site and Client VPN, AWS RAM, Route 53 Resolver, security groups, NACLs; Amazon RDS, Aurora, DynamoDB, MySQL, Oracle 19c

PROFESSIONAL EXPERIENCE

System Specialist (Cloud Infrastructure), LG CNS | São Paulo, Brazil | Sep 2025 – Present

- Primary infrastructure administrator for 12+ AWS accounts and three GCP data pipeline and data warehouse environments; build and maintain infrastructure as code with Terraform and CI/CD pipelines.
- Designed and implemented the AWS architecture of a production platform on Amazon ECS in a Control Tower multi-account landing zone (Aurora, ElastiCache, SQS, EventBridge, GuardDuty).
- Designed and deployed a microservices platform on Amazon EKS across three Availability Zones to the QA environment: API Gateway with VPC Link, Argo CD GitOps from Bitbucket, Amazon ECR, SQS with a dead-letter queue and DynamoDB, with a Direct Connect design for the on-premises Oracle cluster.
- Designed an event-driven carrier integration now in production: SQS FIFO queues, Lambda consumers, API Gateway webhooks and DynamoDB, connected to on-premises systems over Transit Gateway.
- Implemented and operate production hybrid connectivity: Site-to-Site VPN with BGP (StrongSwan and Bird2) on a Transit Gateway shared through AWS RAM, with per-environment route tables; Client VPN for admin access. Removed optional Route 53 Resolver resources to cut cost without affecting VPN access.
- Security: review IAM permissions, roles and policies, and moved pipeline access keys to GitHub OIDC.
- Built an AIOps module on Amazon Bedrock (Amazon Nova Pro, Python Lambda, DynamoDB) that turns CloudWatch alarms and runbooks into validated recommendations in Slack and Jira.
- Built a production conversational analytics assistant on Amazon Bedrock, Athena, Lambda and Cognito, used in Portuguese, English and Korean.
- Built multi-account FinOps reporting (Cost & Usage Report, Glue, Athena, scheduled Lambda, CloudFront) with monthly cost views by project, account and environment and an Excel export.
- Support GCP data platforms (BigQuery, Cloud Composer/Airflow): cut BigQuery and Airflow cost by 50% through procedure optimization and data deduplication, built a FinOps portal for the data platform, and resolve DAG failures and data integration issues.
- Recognized as LG CNS Brasil Merit Employee 2026.

Cloud Administrator, Positivo S+ (Epson do Brasil account) | São Paulo, Brazil | Jul 2022 – Sep 2025

- Continued cloud administration of the Epson do Brasil account after it moved from Algar Tech.

- Maintained AWS workloads (VPC, EC2, RDS, S3, Lambda, CloudWatch, Elastic Beanstalk) with Terraform and CloudFormation.
- Operated hybrid infrastructure (RHEL Linux, Oracle 19c, MySQL and Windows Server) with production troubleshooting and incident resolution.

Cloud Administrator, Algar Tech (Epson do Brasil account) | São Paulo, Brazil | Sep 2019 – Jun 2022

- Led the migration of critical Epson do Brasil applications from on-premises infrastructure to AWS (EC2, RDS, VPC, S3, hybrid connectivity).
- Provisioned and maintained AWS infrastructure with reusable Terraform modules and CloudFormation, standardizing repeatable environments.

IT Infrastructure Technician (Team Lead), Randstad Technologies US | São Paulo, Brazil | Nov 2015 – Sep 2019

- Led a team of 10 field technicians; administered Active Directory and Google Workspace access for 500+ employees, plus DNS, DHCP and VPN services.

IT Infrastructure Technician, Capgemini | São Paulo, Brazil | Oct 2013 – Nov 2015

- Administered Active Directory, DNS, DHCP and WSUS for an enterprise environment of 1,000+ users.

EDUCATION

MBA in Cloud Engineering & Architecture, FIAP | 2026

Degree in Information Technology Management, FAC São Roque | 2015

CERTIFICATIONS

AWS Certified Solutions Architect – Associate (valid through 2027) | HashiCorp Terraform Associate (certified 2023, renewal planned)

In progress: Certified Kubernetes Administrator (CKA), target January 2027

LANGUAGES

Portuguese: Native | English: Intermediate
